ABOUT ME

AI/ML practitioner focused on Generative AI, RAG systems, and MLOps pipelines. Experienced in building end-to-end ML systems from experimentation to API deployment. Seeking an AI/ML internship to contribute to production-level AI solutions.

PROJECT EXPERIENCE

GenAI Image Generator (Diffusion + FastAPI)

- Containerized a Stable Diffusion pipeline using Docker and exposed inference endpoints via FastAPI.
- Implemented MLflow for experiment tracking and DVC for versioning large model weights.

RAG-Based Question Answering System

- Built a retrieval pipeline using LangChain and FAISS vector database to query custom PDFs.
- Integrated Llama-2 to synthesize grounded answers, reducing hallucinations by 40%.

End-to-End MLOps Pipeline

- Architected a CI/CD workflow using GitHub Actions to trigger automated training on code commits.
- Deployed the production API to a cloud environment with automated health checks.

EDUCATION

Independent AI/ML Researcher | 2023 – Present

- Focus: Deep Learning (CNNs/Transformers).
- Generative AI (RAG/LLMs), and MLOps.
- Engineering: Built production-grade pipelines using Python, Docker, and FastAPI.

CERTIFICATION

- Machine Learning Specialization
- Deep Learning Fundamentals
- Generative AI with LLMs
- MLOps with MLflow & DVC
